I have seen 3 separate incidents, two with blue and flashing light and the small white light, and one involving a bright flare-like white light.

(1) I was driving home from a friends house when I saw 2 of the flashing red lights in a valley to the right of the road I was. Thinking the lights belonged to a helicopter I went to see why. The more I saw the lights were, I found I owned near the lights where the lights were. I found there were two separate things. Being nosy, I stopped the car and the one light came toward me until it was directly over the car, with no noise, and started to climb up and I could see it clearly. It got a little bit, but then it started to slow down and stop. The second light I spot started moving slowly in the same direction as the first light. The object passed over head at about 1000 ft. with no noise.

1 The first night I saw the small lights. I was driving along with Jim Meyer. We came along this certain point and the first and the Detroit Edison plant light with a small white fluorescent light below it. We went up Ecorse further. In the top of the hills. The light had past the point we were standing but was in view. Its pattern was arc. Its speed varied also the speed of the upper light varied according to the lights originally. There was no sound of any kind at all. We were within 100 yds. to 150 yds. of the object varied from 50 yds to 100 yds at most. We had it in sight for between 2 to 4 minutes.

2 The next time I saw it was about a week later. It was following the same path at the same time. The following thursday we were looking at the sun and saw a large brilliant white light that hung in the air. There were also the almost perfect lights and the most white light. The lights remained in its position for five minutes and started to move. The large white light showed on the object moved. The more the light dimed the faster it moved. When it got small in the other lights it was going at a tremendous rate of speed.

3 The last time I saw anything I had a friend with me. There names are listed here. It looked like the lights dimmed on 2,

It was within 1000 yds at about 500 yds high. It then followed an arc, but went on low in the little arc. The light was the same color as natural. no noise heard.
