10. BRIEF SUMMARY OF SIGHTING Object seemed to appear from behind the moon and then disappear back behind the moon. Appeared only as a light.		11. COMMENTS This sighting resulted from the misidentification of the bright star Regulus (mag 1.3) during the occultation which occurred on 18 Jun. This was not a true occultation because the true occultation for it could only be observed from South America. Enough of the top of the moon was visible from North America to cause the effects reported by the witnesses. It is concluded that the sighting resulted from this near occultation.

The object could have been any object of sufficient size to reflect sunlight, any place between the Earth and the moon. I have formed no opinion of the nature of the object definitely, although from the report of its description and motion indicated that the object may have either been a powered space vehicle (the apparent stopping at the middle of the moon's disk) or a satellite in a very eccentric orbit around the moon. If this is so, the orbit would have precessing rapidly, etc and with apogee many times higher than perigee, and towards earth.

Yes

No

IF you answered YES, then what speed would you estimate? _____

The object appeared over the edge of the moon indicated. It was noticed by a lady in the street, who called it to the attention of the boy, who then watched it for a while. He left in the middle of the event to watch T.V., but the woman kept watching. We are going to give forms to the lady and the boy to fill in later.
