5. PHOTOS <input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	6. SOURCE Civilian		<input type="checkbox"/> Was Astronomical <input type="checkbox"/> Probably Astronomical <input type="checkbox"/> Possibly Astronomical
7. LENGTH OF OBSERVATION not rptd	8. NUMBER OF OBJECTS thousands	9. COURSE falling	<input checked="" type="checkbox"/> Other Chaff <input type="checkbox"/> Insufficient Data for Evaluation <input type="checkbox"/> Unknown
10. BRIEF SUMMARY OF SIGHTING Sample of foil sent for analysis. Thousands observed falling over area about several hundred feet wide. Glittered while in air. Pieces looked as though they were subjected to heat. Additional witnesses insist that they feel a tingle when they touch the objects.		11. COMMENTS Spectrographic analysis showed objs to be Radar chaff similar to 2S A1 as specific under AMS 4001-b sheet stock.	

SUBJECT:

**Salamanca, N.Y.
August 3, 1958**

**Commanding Officer
Wright Air Force Base
Dayton, Ohio**

Dear Sir:

Yesterday at approximately 600pm, I noticed thousands of silver colored objects of various sizes falling around my tower while working. I assumed they were foil dropped by an air force plane for fouling radar, although I did not see nor hear any plane. I could see these objects glittering in the sunlight for several hundred feet in the air.

Upon searching I found several pieces, of which I am enclosing this sample of metal, which looks as if it were through an explosion or some terrific heat.

Of course this has evoked much and conjecture, everything from a jet bomber explosion to a falling sputnik, and several of the men insist they feel a tingle in their hand where they touched this.

For what it may be worth for evaluation and testing, this is just on small piece, there must be thousands more around if you are interested.

Yours very truly,

Bradford, Pa.

REMARKS 1. UFO from general public. 2. The description of the object is definitely characteristic of radar chaff. SAC has practice exercises quite often and several times the public has sent in samples as UFOs. 3. The analysis is attached for your information only.

COMMENT #2

AFCIN-4E2c/CANaugle/gdh
50193/Bg 828/Rm 150/Area A

1. The metal sample furnished, along with the above report, has been analyzed spectographically and shows the following composition:

Al	Si	Cu	Fe	Mn	Mg	Ti
.1	.05	.2	.1	.01	.01	

2. This composition corresponds very closely to 2S Al as specified under AMS 4001-B for sheet stock. Because of the ductility exhibited by the specimen (bending back and forth with fingers is possible), it is concluded that the sample is sheet stock and not cast; hence, photomicrographs were not made. The sample in question could well be radar foil which has been burned.

Dear [REDACTED]

This is to acknowledge your letter of 3 August 1958 concerning an unidentified flying object which fell from the sky on 2 August at Salamanca, New York.

A spectographic analysis of the material furnished with your letter shows the objects to be radar chaff.

Sincerely,

LAWRENCE J. TACKER
