AIR INTELLIGENCE INFORMATION REPORT

FROM (Agency)	REPORT NO.	PAGE 1 OF 1 PAGES
SAAMA		

In compliance with AF letter 200-5, dated 29 April 1952, the following information submitted:

(1) Observation was made of an undetermined number of lights of which the intensity was equal to that of an average star. Lights appeared to be the size of a pea at two feet distance. No aerodynamic features noted. A trail, similar to a vapor trail, was observed when one of the lights passed through the halo light of the moon. Speed undetermined but reported to have been much faster than any conventional aircraft known to observer. No sound was heard. Some lights flew a straight course; others executed a circle of approximately fifteen miles in diameter over the city on their course from north to south. Lights disappeared by gradually fading from view. The lights appeared first in the north sky and traveled afore mentioned course. Before each light disappeared in the south sky, another appeared in the north sky and flew approximately the same course. At no time, however, were there more than three lights visible at one time. Meteor Shower ?

(2) Lights were observed 2220 hours, CST, 25 March 1953, and were observed for approximately one hour and thirty minutes.

(3) A visual surface observation through six power binoculars was made.

(4) Observer was at his residence, [redacted]t., San Antonio, Texas, at the time of the sighting. Lights appeared in the north sky and flew south. Distance and altitude unknown.

(5) Lights were observed by Captain and Mrs [redacted] Mr. & Mrs. [redacted] and their children, [redacted] and [redacted], San Antonio, Texas. Reliability of observers unknown.

(6) Fair weather prevailed at the time of the sighting.

(7) No activity or condition is known to have existed at the time which might have accounted for the sighting.

(8) There is no physical evidence of the sighting.

(9) Contact with the local AC & W unit in an effort to identify lights met with negative results. ✓

(10) Lights were reported to aircraft control towers of Kelly and Brooks Air Force Bases by observers. Control tower personnel confirmed visual observation. Nothing reported from air traffic.

S T A T E M E N T

At approximately 2315 hours, 25 March 1953, I was standing in the front yard of my residence at 514 Monticello Ct., San Antonio, Texas, talking to my neighbor, Mr. [redacted] when I noticed a moving light in the north sky. At first I thought it was a shooting star until I noticed it was traveling in a circular course. I called Mr. [redacted] attention to it and then we called our wives to observe it also. The lights appeared first in the north and were traveling on a southerly course at a very high rate of speed and disappeared by gradually fading out of sight. As a rule, before each light disappeared in the south sky, another appeared in the north sky and flew approximately the same course. At no time were there more than three lights visible at one time. Occasionally one would change course and circle the city on approximately a fifteen mile radius in a clockwise direction. The speed appeared to be faster than any aircraft known to me therefore I hesitate to estimate the speed. No sound was heard at any time. At one time, one of the objects passed through the halo light of the moon and a trail, similar to a vapor trail, appeared but the trail did not persist or remain visible. The most unusual thing about what was seen was the tremendous speed and complete lack of sound. About fifteen minutes after noticing the first light, Mrs. [redacted] telephoned the Brooks AFB control tower. We checked later and learned that they too had seen these lights. A few moments after Mrs. [redacted] telephoned Brooks control tower,

I reported the lights to the Kelly AFB control tower and found that the personnel on duty there at the time also saw the lights.

I certify that the above statement is true and correct to the best of my knowledge:

1st Lt. Robert Olsson
Wright-Patterson AFB.

Dear Lt. Olsson;

This is a belated report on the last batch which I received at the end of April.

Just as soon as our plans for employing Miss Gluck officially go through, I shall be able to send you a sheet with comments on each individual case, so that you will have my comments on each folder. The letter method has obvious drawbacks. But until that time comes and she can handle my typing and completion of forms, I had better stick to this letter method.

In this latest batch we have only 4 really interesting cases. I might mention a 5th, 28 March 53, Scott AFB, which is the 1st report I've seen of an honest to goodness mirage. 6 Cases have only one observer and I'M following my usual rule of discounting those.

8 April was a meteor.

The Great Falls 3 April case was Venus if reported time was in error.

28 March Albrook AFB was probably Venus.

31 March Honshu, and 30 March Lyle, Wash., are puzzling but could possibly have been balloons.

The 8 April Greenland case was an obvious meteor.

This brings us to the interesting cases:

25 March San Antonio could hardly have been a mirage and I'm surprised there was no radar pickup. Was there any aircraft like helicopters that might explain this. Anything more come in on this one? Don't think this is good enough for a pinch-bottle but it should be listed as Nocturnal meandering Kight.

29 March Spooner, Wisc: Duration times needs checking here. Hard to to believe that object could have done all that in 15 seconds. An interesting case and one of the regular questionaires should be sent to Mr. Gilette.

Next is the 12 April Stead AFB. I think this is the most interesting case of the batch, and I hope you receive more dope on it. Questionaires should be sent. I'd like to see Menzel explain this one! Is there any possibility that these could have been aircraft? Apparently ducks have been eliminated.

As for the 26 March, Equasseur AFB although NML, the data are contradictroy and insufficient. Perhaps this was a helicopter? We ought to have much more information on this one. Has this been received?

Sincerely,

Allen Hynek

AN UNUSUAL FEATURE OF THIS OBSERVATION WAS THAT AFTER FLYING A STRAIGHT COURSE FROM NORTH TO SOUTH FOR A TIME, ABOUT HALF OF THE LIGHTS EXECUTED A COMPLETE CIRCLE OF APPROXIMATELY FIFTEEN MILES IN DIAMETER THAN CONTINUED ITS FLIGHT IN A SOUTHERLY DIRECTION UNTIL THEY DISAPPEARED BY GRADUALLY-FADING OUT OF SIGHT. COMMENT NO. 1

Lt Olsson/vs
65365/B 263/P A-30

1. Inclosed is a sighting of an unidentified aerial object made by several experienced observers on 25 March 1952 at 2315 CST over San Antonio, Texas.

2. ATIAE-5 requests that you examine the sighting to determine the feasibility of its being caused by certain astronomical phenomena such as an annual meteor shower. The description of the objects seems to fit that of a meteor shower with one notable exception: some of the objects apparently traveled in a circular course. A local radar station made no contact, thus eliminating the possibility of aircraft.

3. We would appreciate your comments on the subject sighting.

VERBAL COMMENT BY DR. ROBINSON TO LT. OLSSON:

Halo around the moon indicates possible presence of clouds on high haze. A rotating beacon reflecting again and again off smoke clouds may have caused the sighting. Suggests ATIAE-5 get about conditions from that day.

Dr. Robinson does not feel objects were meteors, since no known meteor shower exists on this date and even more important, meteors do not have circular paths.

The lights appeard first, generally in the north and traveling on a southerly course at a very high rate of speed. Occassionally one would change course and circle the city on approx indstry 15 mile radius in a [redacted] clockwise direction. The speed appeared to be faster than any aircraft known to me therefore I hesitate to estimate the speed. At no time was any sound heard. At one time, one of the objects passed through the halo light of the moon and a trail, similar to a vapor trail, appeared but the trail did not persistor remain visible.
